Date: February 28, 2013

Report No. Signal Shop 2013-07

---

## Daily Signal Shop Report for February 28, 2013

### Signal Shop Work Day 2013-07

Crew: Dennis, Gary, Carl, Karl, Michael, Dale, Joe1, Bill

Briefing by: Joe1 – Signal Shop Supervisor

Safety Rule For Today: 1.1.2 Alert and Attentive

The crew attended a one hour fire extinguisher use training class put on by the contractor that performed the annual fire extinguisher inspections.

After the fire extinguisher training, Dennis gave a very professional presentation on propane bottle service valve. Those shop members not in attendance today will need to hear this presentation in the near future. It sure was an eye opener to those of us that thought we knew all about their proper use

Carl worked on the 2 gongs that are partially restored.

Dennis, Bill, Gary, and Michael pressed on with their "attack" on Wabco # 6 It is now completely disassembled and ready for heavy duty cleaning etc. in preparation for complete restoration.

Carl insured that the bead blaster, that he completely serviced the week before, was stocked with beads and was operational for the rest of the crew.

After "beans" the Signal Shop [and the Signal Department] took delivery of 2 semaphores that Dr. Hardy delivered to us for restoration. We will now have the opportunity to "show our stuff". Carl was asked [and he accepted] the task/responsibility for being the "lead" on this very important project. He will be researching our needs and putting together a plan to insure that we end up with a great product for use by the new Railroad Technology Museum.

Gary tagged Wabco # 5

Jim continued the enormous task of inventorying and cataloging all of our assets [toys] and keeping the MSDS file in order.

A diversified and fun day for all.

Respectively Submitted,  
Joe1, Signal Shop Supervisor
